

Three steps for finding the mode:

1. Find all the distinct categories or values in your set of data.
2. Write down the frequency of each value or category.
3. Pick out the one(s) with the highest frequency to get the mode.

Find the mode for the following sets of data.

Values	1	2	3	4	5	6	7	8
Frequency	4	6	4	4	3	2	1	1

Category	Blue	Red	Green	Pink	Yellow
Frequency	4	5	8	1	3

Values	1	2	3	4	5
Frequency	2	3	3	3	3

When do you think the mode is most useful?

When is the mode least useful?
